Hackathon 3 Day 1

Laying the foundation for your marketplace journey
Niche E-Commerce Website.

I have successfully completed Hackathon Day 1 and made great progress on my (FURNITURE)website. I wrote an introduction, listed its features, and outlined innovative ideas to enhance the website. Over the next 7 days, I will work consistently to implement these ideas and bring my vision to life.

In Step 1 you need to explain whether your website is E-commerce or Q-commerce.

Step 2: Define Simple Business Goals

, simple business goals are defined. These goals should be clear and achievable. Example goals could include

:Step 3: Create a Data Schema (Product, Order, and Customer)
, you need to create a data schema for the website. This schema will define how data related to products, orders, and customers will be structured.

"Hackathon 3 Day 1"

Step : 1.
Choose your Markelplace Type'

Ê : commerce'

A platform where customers can explore a vast variety of furniture for all "home" spaces like living rooms, bedrooms, Kitchens and offices.

What is E-commerce?

E-commerce reperse to the buying and selling of good and servies over the internet it involves online transactions, where business and consumers interact though digital platforms.

Step : 2

"Business . Goals"

Disjointed shopping experience and slow delivery disrupt convenience Our marketplace ensure a seamless shopping journey fast delivery and a focused user-friendly experience

Step: "3"

"Creating a data Schema"

Product:
ID, description, price, stock, material and size.

Order Management:
Pending, Proccered, shipped, delivered.

Customer:
Data security store customer information
name, adress, contact, detail.

Product		Order
Product -id		order-id
name		Proccesed
description		order-date
Price		Total Amount
stock		Shipped
material		order-notes
size		delivered

Customer
Customer-id
first-name
contact
adress
Payment-method
Phone number.
